ManatOS - Storage Adapter Capability and Strategy Model
Generic entity/business-object services
metadata-driven persistence semantics
System behavioral guarantees
atomic writes | uniqueness | references
persisted calculations | semantic schema
Storage registry
adapter + family inheritance
effective native capabilities
Adapter implementation strategy
choose native mechanism or ManatOS fallback
InMemory JSON
current runnable adapter
application checks/calculations
Relational family
Desired semantic schema -> physical strategy
constraints | indexes | references
calculated data | programmable objects
Server RDBMS family
SQL Server | MariaDB | PostgreSQL
Embedded RDBMS family
SQLite
