ManatOS - Client/UI Contract Architecture
Authoritative API / domain
business operations + authorization
projects facts/contracts
persistence boundary
Portable client contracts
canonical metadata | UI metadata
capabilities | API envelopes
expression/context semantics
Storage adapters
server-owned persistence semantics
authorized API operations
consumed by
UI-capable client
presentation + interaction state
framework-independent semantics
realized today as
may also be realized as
Current realization
Node.js/Express BFF + EJS/Bootstrap
+ browser CTX/runtime
Potential realizations
Angular | React | mobile | desktop
specialized/read-only clients
